ACCESS SERVICE

2. General Regulations (Cont'd)2.4 Payment Arrangements and Credit Allowances (Cont'd)2.4.7 Ordering, Rating and Billing of Access Services Where More Than One Exchange Telephone Company is Involved

The provisions of meet point billing are applicable to Local Transport Termination and Facility, Transport Multiplexing, Host/Remote Transport Termination and Facility (if applicable), Switched Access Channel Mileage and Special Access Channel Mileage recurring charges only. The provisions of meet point billing are also applicable to the Switched Access Local Switching Installation nonrecurring charge and the Directory Access Service Installation nonrecurring charge when the provisions set forth in (L) following are applicable. All other recurring and nonrecurring charges for services provided by each Exchange Telephone Company are billed under each company's applicable rates as set forth in (B) through (E) following.

The Telephone Company accepts and adheres to the Ordering and Billing Forum guidelines, Multiple Exchange Carrier Access Billing (MECAB) and Multiple Exchange Carrier Ordering and Design (MECOD). These guidelines apply to the Access Services as set forth in (B) through (E) following.

The Telephone Company will handle ordering, rating and billing of Access Services under this tariff where more than one Exchange Telephone Company is involved in the provision of Access Service as follows.

(A)

- (1) When a Feature Group A or CSL BSA Switched Access Service is ordered by a customer where one end of the Local Transport element is in the Telephone Company operating territory and the other end is in another Exchange Telephone Company operating territory, the Exchange Telephone Company in whose territory the first point of switching is located will accept the order. In addition, the Exchange Telephone Company in whose operating territory the customer point of termination is located must also receive a copy of the order from the customer. The Exchange Telephone Company that accepts the order will then determine the charges involved, arrange to provide the Access Service ordered and bill the charges in accordance with its Access Servicetariff. ACCESS SERVICE

7. Special Access Service (Cont'd)7.1 General (Cont'd)7.1.1 Channel Types

There are several types of channels used to provide Special Access Service. Eight of these channel types are classified as Basic Serving Arrangements (BSAs) under the Open Network Architecture structure. Each type has its own characteristics. All are usually subdivided by one or more of the following: (T)

- Transmission specifications
- Bandwidth
- Speed (i.e., bit rate)
- Spectrum

Customers can order a basic channel and select, from a list of available transmission parameters and channel interfaces, those that they desire to meet specific communications requirements.

For purposes of ordering channels, each has been identified as a type of Special Access Service. However, such identification is not intended to limit a customer's use of the channel or to imply that the channel is limited to a particular use. For example, if a customer's equipment is capable of transmitting voice over a channel that is identified as a Metallic Service in this tariff, there is no restriction against doing so.

Following is a brief description of each type of channel:

Metallic BSA - a channel for the transmission of low speed varying signals at rates up to 30 baud.

Telegraph Grade BSA - a channel for the transmission of binary signals at rates of 0 to 75 baud or 0 to 150 baud.

Voice Grade BSA - a channel for the transmission of analog signals within an approximate bandwidth of 300-3000 Hz.

Program Audio BSA - a channel for the transmission of audio signals. The nominal frequency bandwidths are from 50 to 15000 Hz, from 200 to 3500 Hz, from 100 to 5000 Hz or from 50 to 8000 Hz.

(TR 502)

Issued: October 15, 2004

Effective: October 30, 2004

(T)
(T)

ACCESS SERVICE

7. Special Access Service (Cont'd)7.1 General (Cont'd)7.1.1 Channel Types (Cont'd)

Broadcast Video BSA - a channel for the transmission of a standard (Z)
525 line/60 field monochrome or National Television Systems
Committee color video signal of broadcast quality and its
associated 5 or 15 kHz audio signals. The bandwidth for a
Broadcast Video channel is either 30 Hz to 4.5 MHz or 30 Hz to 6.6
MHz.

Multichannel Video - a channel for the Frequency Modulation (FM)
one-way transmission of up to sixteen standard 525 line/60 field
monochrome or National Television Systems Committee color video
signals of less than broadcast quality and their associated audio
signal(s). The bandwidth for each video signal within the MVS
channel is 6 MHz.

Supertrunking Transport Video Service - a channel with a bandwidth
of up to 750 MHz for the transmission of multiple Amplitude
Modulation (AM) standard 525 line/60 field monochrome or National
Television Systems Committee (NTSC) color video signals and
monaural or Broadcast Television Systems Committee (BTSC) stereo
audio signals over fiber optic facilities.

Wideband Analog - a channel for the transmission of wideband
signals. The bandwidths are from 60 to 108 kHz (Group), from 312
to 552 kHz (Supergroup), from 300 Hz to 18 kHz, from 29 to 44 kHz
or from 28 to 44 kHz.

Wideband Data - an analog channel for the transmission of
synchronous serial data at rates of 19.2, 50.0 or 230.4 kbps or
asynchronous serial data at rates of up to 19.2, 50.0 or 230.4
kbps.

Digital Data BSA - a channel for the digital transmission of
synchronous serial data at rates of 2.4, 4.8, 9.6 or 56.0 kbps.

High Capacity BSA - a channel for the transmission of isochronous
serial digital data at rates of 1.544 or 44.736 Mbps.

High Capacity - a channel for the transmission of isochronous
serial digital data at rates of 3.152 Mbps.

WATS Access Line (WAL) - a channel between a customer designated
premises and a WATS Serving Office.

(TR 502)

Issued: October 15, 2004

Effective: October 30, 2004

ACCESS SERVICE

7. Special Access Service (Cont'd)

7.1 General (Cont'd)

7.1.1 Channel Types (Cont'd)

19.39 Mbps Digital Video Transport Service - a channel for one-way broadband transmission, at a rate of 19.39 Mbps, of high quality video signals in digital format conforming to the ANSI/SMPTE Standard 310M.

45 Mbps Digital Video Transport Service - a channel for one-way broadband transmission, at a rate of 45 Mbps, of high quality video signals in digital format conforming to ANSI digital hierarchy.

Channel Extension Service—a channel for broadband data transmission between mainframe computers, between mainframes and peripheral devices and/or between Local Area Networks (LANs). The transmission may be provided at data rates up to 1.25 Gbps.

Facilities Management Service - a service option that provides for Telephone Company management of engineering and design of a customer's Special Access Service network from the customer's designated primary premises to serving wire centers of secondary locations within the same LATA.

IntelliLight® Dedicated SONET Ring - a dedicated high capacity customized network in a ring architecture or topology that assures survivability.

IntelliLight® Optical Transport Service - a managed customized network in a ring architecture for the transport of multiple protocols of various wavelengths.

(D)

(D)

Bonded Digital Link Service - connecting channels for transmission of voice or data between an end user's local exchange service terminating at a digital cross-connect facility and a Telephone Company provided Special Access service within that same wire center or a different wire center within the same LATA.

(N)

LAN Extension Service - a channel for fiber transport connectivity at 10 Mbps, 16 Mbps Token Ring, 100 Mbps, 1 Gbps Ethernet, or 1 Gbps Extended Distance Interface.

Verizon Optical Networking - a channel for managed optical transport of data signals at various speeds over a Telephone Company shared network.
