ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service8.3.1 Description

Frame Relay Service (FRS) is a fast packet network that provides the customer high speed access and throughput to different customer addresses. Utilizing statistical multiplexing, the frame relay network enables the customer to allocate circuit bandwidth to applications as needed, rather than assigning fixed channels to specific applications.

Permanent Virtual Connections (PVCs) are logical channels that connect ports on a frame relay switch or between frame relay switches. PVCs are end-to-end, bi-directional channels that are established and disestablished via the service order process. A separate PVC must be established to each location that the customer desires to transmit data. These PVC channels are virtual because they are established in software tables and do not tie up facilities when not in use. Multiple PVCs can be defined over a single Frame Relay Access Link, thereby providing a single access line the capability to transmit data to multiple destinations.

Physical access to the Telephone Company's frame relay network is provided via a special access channel termination or an electrical cross-connect used in conjunction with expanded interconnection. Special access channel terminations must be ordered in accordance with the provisions set forth in Section 7, preceding. Electrical cross-connects must be ordered in accordance with the provisions set forth in Section 17, following.

Customers who purchase FRS must also ensure that the special access facilities ordered from the Telephone Company are equipped with Bipolar with 8 Zero Substitution (B8ZS) line code, as well as Extended Super Frame (ESF) capability for DS1 facilities. The Telephone Company will provision FRS to support industry standards for the User to Network Interface (UNI) and the Network to Network Interface (NNI).

FRS is offered where facilities exist. If it is necessary to construct facilities to satisfy service requests, the service may be provided pursuant to the Telephone Company's Special Construction provisions set forth in Section 14 following.

EFFECTIVE DATE:
November 16, 2000

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.2 Service Components(A) Access to the Frame Relay Network

Special access channel terminations or electrical cross-connects are used to connect the customer premises to the FRS UNI or NNI Port Connection. Special access channel terminations are provided under Section 7 preceding, and are available at speeds of 56.0/64.0 kbps through 1.544 Mbps for the UNI Port Connection and at 1.544 Mbps and 44.736 Mbps for the NNI Port Connection. Electrical cross-connects are provided under Section 17, following, and are available at 1.544 Mbps for the UNI Port Connection and 1.544 Mbps and 44.736 Mbps for the NNI Port Connection.

(B) User to Network Interface (UNI) Port Connection

The User to Network Interface (UNI) Port Connection is a standard interface used to connect the end user to the Telephone Company's frame relay network. It receives the data frame from the customer's network or CPE devices and verifies that the customer address destination is valid before relaying the frame. The UNI Port Connection is available at 56.0/64.0 kbps through 1.544 Mbps. The transmission speed of the UNI Port Connection may not exceed the transmission speed of the special access channel termination or electrical cross-connect. One special access channel termination or electrical cross-connect is required per UNI Port Connection.

(C) Network to Network Interface (NNI) Port Connection

The Network to Network Interface (NNI) Port Connection provides bi-directional polling between the Telephone Company's FRS switch and the interexchange carrier's or other customer's frame relay network.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.2 Service Components (Cont'd)(C) Network to Network Interface (NNI) Port Connection (Cont'd)

The NNI Port Connection is available at speeds of 1.544 Mbps and 44.736 Mbps. The NNI Port Connection must be provided at the same transmission speed as the special access channel termination or electrical cross-connect. One special access channel termination or electrical cross-connect is required per NNI Port Connection

(D) Permanent Virtual Circuits (PVCs)

The PVC provides a software defined electronic path between two port connections within the frame relay network. A UNI or NNI Port Connection can be associated with any number of PVCs. Since all PVCs need not be in use at the same time, it is possible for the total bandwidth of all PVCs associated with one Port Connection to exceed the bandwidth of the Port Connection. It is not possible, however, for the simultaneous aggregate of the PVC's throughput to exceed the bandwidth of the Port Connection. Such a relationship is referred to as over-subscription or overbooking, and when this occurs, there can be no guarantee that the bandwidth defined for that PVC will be available at any point in time.

(E) Committed Information Rate (CIR)

CIR defines the amount of data throughput on a designated PVC that the Telephone Company will support under normal operating conditions. Any data burst beyond the CIR may be labeled Discard Eligible (DE) if the data transfer rate exceeds the CIR of the PVC being used. If the frame relay network develops congestion, the frames marked DE may be discarded.

EFFECTIVE DATE:
November 16, 2000

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.3 Rates Regulations

The minimum service period for Frame Relay Service is one month.

When the customer orders additional PVCs with a designated CIR, the CIR nonrecurring charge shall apply. When a change is made to a customer's frame relay configuration at the customer's request, the administrative nonrecurring charge shall apply. Such changes are defined as those rearrangements necessary to add, delete, or rearrange the customer's configuration, including changes to CIRs. Although multiple changes may be caused by such actions, only one administrative charge will apply.

When the customer changes the CIR on an existing PVC, the CIR nonrecurring charge will apply in addition to the administrative nonrecurring charge.

8.3.4 FRS Term Discount Plans(A) General

Frame Relay Service Term Discount Plans (FRSTDPs) are available for UNI port connections at the speeds of 56.0/64.0 kbps through 1.544 Mbps and for 1.544 Mbps and 44.736 Mbps NNI port connections. A FRSTDP provides the customer with discounted rates for the services listed. The customer agrees to a minimum service commitment per service on a state or national basis when the TDP is established.

Both the UNI and NNI port connections for a given circuit must be ordered for the same commitment period with the same service date for the same customer. A customer establishes a FRSTDP by selecting all or a portion of their in-service port connections and committing those port connections to a minimum term of 1 year* up to a maximum term of 5 years. Customers may disconnect or move port connections within the committed area (i.e., state or nation) and not be subject to termination liability charges as long as the commitment levels are maintained.

* One and two year term discount plans are limited to existing plans for existing customers as of July 8, 2000. Existing plans include only those channel terminations and/or multiplexers committed as of July 8, 2000. Customers may not rearrange existing circuits or commit new circuits to a one or two year TDP after July 8, 2000. Existing one and two year customers will not be subject to minimum commitment thresholds or termination liability charges.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.4 FRS Term Discount Plans (Cont'd)(B) Ordering Provisions

The customer must order a FRSTDP in writing to the Telephone Company. A FRSTDP may be ordered based on the following plan options.

- 1 Year*
- 2 Years*
- 3 Years
- 5 Years

Customers who subscribed to a FRSTDP with a commitment period of other than 1 year* (12 months), 2 years* (24 months), 3 years (36 months), or 5 years (60 month) prior to September 4, 1999 will have until March 4, 2000 to convert to a new FRSTDP. If the customer does not select a new FRSTDP, the rates will convert to the prevailing month-to-month frame relay rates set forth in 8.3.5 following. No termination liability charges will apply for this conversion.

The customer must specify the plan and the length of the service commitment period. Once the plan is established, and commitment periods are agreed upon, standard access ordering procedures will be followed.

When a customer converts to a FRSTDP, no access order charges are applied toward facilities in-service at that time. If a customer moves from a month to month plan to a FRSTDP, or upgrades from one FRSTDP to another, no access order charges are applied.

* One and two year term discount plans are limited to existing plans for existing customers as of July 8, 2000. Existing plans include only those channel terminations and/or multiplexers committed as of July 8, 2000. Customers may not rearrange existing circuits or commit new circuits to a one or two year TDP after July 8, 2000. Existing one and two year customers will not be subject to minimum commitment thresholds or termination liability charges.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.4 FRS Term Discount Plans (Cont'd)(C) Service Rearrangements

When a UNI or NNI port connection committed to a FRSTDP is rearranged, a charge equal to one half the UNI or NNI port connection nonrecurring charge associated with the month-to-month rates for that service will apply. Service rearrangements are changes to existing (installed) services which do not result in either a change in the minimum period requirements as set forth in 5.2.6(E) preceding or a change in the physical location of the point of termination at the customer designated premises. Changes in the physical location of the point of termination are treated as disconnects and starts, and will be assessed the nonrecurring charge associated with the month-to-month rates for that service.

(D) Termination Liabilities

If a customer disconnects any portion of their FRSTDP service prior to the expiration of the commitment period, the customer will be billed 50% of the monthly FRSTDP charges for the remaining portion of the committed term. For example, a customer disconnecting in the 12th month of a 3 year plan will be charged 50% of the remaining 24 months of billing.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.3 Frame Relay Service (Cont'd)8.3.4 FRS Term Discount Plans (Cont'd)(E) Rate Changes

In this section, the term "rate" refers to the charges associated with the entire circuit covered by a FRSTDP. Rate increases or decreases will automatically be applied to the monthly term plan rates for the remaining term of the FRSTDP. If a Telephone Company initiated rate increase causes a customer's rates to increase by 10% or more at any one time, the customer may cancel the FRSTDP without incurring termination liability charges.

(F) Extension of a FRSTDP Commitment Period

FRSTDP commitment periods can be extended by the customer at any time during the term of the plan, up to a maximum of 5 years. The number of months accrued in the current plan will apply toward the new plan selected. For example, a customer having completed 15 months of a 3 year commitment can extend the commitment to 5 years and no additional charges will be assessed. The first payment will be considered the 16th payment under the new 5 year Plan.

(G) Renewal of a FRSTDP

At the end of the FRSTDP service commitment period, the customer may subscribe to a new FRSTDP at the prevailing rates set forth in Section 8.3.5 following. If the customer does not select a new FRSTDP, the rates will convert to the prevailing month-to-month UNI and NNI rates set forth in Section 8.3.5 following. The customer will have a 90 day grace period to renew their FRSTDP before month-to-month rates will be assessed.

(H) Cancellation Charges

When a customer cancels an order for frame relay services being provided under a TDP, cancellation charges, as set forth in 5.2.4 preceding, will be calculated using the nonrecurring charges associated with the month-to-month rates for the service being cancelled.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.4 Wide Area Data Network Service8.4.1 Service Description

Wide Area Data Network (WADN) Service is a router-based data network service provisioned over Telephone Company provided facilities. WADN Service provides customers with local area network (LAN) to LAN, workstation to LAN, and LAN to workstation connectivity. WADN Service is provided on a dedicated basis at port speeds of 56.0 kbps, 128.0 kbps, and 1.544 Mbps.

WADN Service is offered where facilities exist. In situations where the Telephone Company must construct facilities to satisfy customer requests, WADN Service may be provided in accordance with the special construction provisions set forth in Section 14 following. If the customer is located in an area outside of the WADN, special access rates as set forth in Section 7 preceding will apply to dedicated facilities provided for customer connection to the WADN.

8.4.2 Rate Regulations

The minimum service period for WADN Service is three months.

When ordering WADN Service, the customer must specify all locations within the WADN which will be accessed for data transactions. The Dedicated Network Access Charge is applicable for each location connected to the WADN.

The administrative charge applies to each request received from a customer to add, change, delete, or otherwise modify the customer's routing patterns within the WADN.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.5 Digital Subscriber Line Technology8.5.1 General Description(A) Basic Digital Subscriber Line (DSL) Description

DSL is an access data technology offered in speed levels of: 1) up to 512 Kbps down/up to 128 Kbps up; 2) up to 1.5 Mbps down/up to 384 Kbps up; 3) up to 640 Kbps down/up to 640 Kbps up; and 4) up to 3.0 Mbps down/up to 512 Kbps up. The "up" speeds represent transmission speeds in kilobits per second (Kbps), from the point of demarcation at the customer designated premises to the Telephone Company's DSL connection point; while the "down" speeds represent transmission speeds in Kbps or megabits per second (Mbps), from the Telephone Company's DSL connection point to the point of demarcation at the customer's designated premises. Actual speeds may be affected by loop distance and other factors.

The DSL technology may require a splitter at both the customer's designated premises and the Telephone Company's serving wire center to split the traffic between data and voice. The customer is responsible for providing and maintaining the splitter at the customer's designated premises. The voice traffic will be routed to the serving wire center switching equipment while the data traffic will be directed through a multiplexer for connection to the Telephone Company's network.

(B) DSL Provisioning

DSL technology provides a virtual private line connection from the customer's designated premises to the point of connection on the Telephone Company's network. Access from the Telephone Company's DSL connection point will be provided where facilities and equipment exist.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.5 Digital Subscriber Line Technology (Cont'd)8.5.1 General Description (Cont'd)(B) DSL Provisioning (Cont'd)

The Telephone Company will qualify the local exchange service loop between the customer's designated premises and the serving wire center. The purpose of qualification is to determine the availability and suitability of existing Telephone Company facilities to provide the technology, and to determine if loop conditioning is required to support DSL. The Telephone Company will not provision this technology on facilities which are not suitable for DSL.

The Telephone Company does not undertake to originate data, but offers the use of its DSL technology, where available, to customers for the purpose of transporting data originated by the customer or a third party.

All customers will be served from the nearest suitably equipped end office. Information pertaining to end offices equipped to provide DSL technology is set forth in the National Exchange Carrier Association, Inc. Tariff F.C.C. No. 4. DSL will be provided subject to the availability and limitations of the Telephone Company wire centers and outside plant facilities. DSL technology is only available where technical capabilities permit such facility distance and type of physical plant.

(C) Responsibility of the Telephone Company

The Telephone Company will provision and maintain DSL technology for the customer up to and including the splitter and Network Interface Device. The Telephone Company will advise the

customer of the customer premises equipment necessary to support DSL technology that the customer will need to purchase.

(D) Rights of the Telephone Company

The Telephone Company will not provision DSL if it has reasonably determined that: a) it is not technically feasible over existing facilities; or b) it will cause interference problems within the Telephone Company's network or other facilities.

During the Telephone Company's network maintenance and software update period, it may be necessary to temporarily place the DSL central office equipment out of service. The Telephone Company also reserves the right to temporarily interrupt the DSL technology at other times in emergency situations.

(E) Responsibility of the Customer

The customer is responsible for providing compatible customer premises equipment that is used for connection to DSL technology.

The customer is responsible for providing the Telephone Company with the necessary information (e.g., data link connection identifier(s), and/or internet protocol) to provision the DSL technology.

The customer ordering DSL technology on behalf of its subscriber(s) must obtain a letter of agency.

8.5.2 Rate Regulations

(A) Rate Elements

- (1) DSL arrangements are available in three options and are based on the "downstream" and "upstream" speed combinations chosen by the customer. These options are listed below:

	<u>Downstream Speed</u>	<u>Upstream Speed</u>
Option I	up to 512 Kbps	up to 128 Kbps
Option II	up to 1.5 Mbps	up to 384 Kbps
Option III	up to 640 Kbps	up to 640 Kbps
Option IV	up to 3.0 Mbps	up to 512 Kbps

A nonrecurring charge and a monthly recurring rate will apply per DSL arrangement as set forth in 8.5.3 following.

- (2) Line conditioning is available, at no charge, and may be required if the facility will not accommodate DSL technology. This may include, but is not limited to, the removal of load coils, bridge taps and/or repeaters. The Telephone Company does not warrant that line conditioning will permit the provision of DSL technology.

8. Specialized Network Services (Cont'd)8.5 Digital Subscriber Line Technology (Cont'd)8.5.2 Rate Regulations (Cont'd)(B) DSL Term Discount Plan (DSL-TDP)(1) General Description

The DSL-TDP provides the DSL customer with rate stabilization and discounted rates based upon the term commitment selected by the customer.

Term commitments of one, two, three, four and five years are available. Rates and charges for DSL-TDP are set forth in 8.5.3 following.

Rate decreases will automatically be applied to the monthly recurring rates for the remainder of the service period. Additionally, customers may discontinue DSL-TDP, without penalty, should the monthly recurring rates increase by 10% or more at any one time.

(2) Nonrecurring Charges

A nonrecurring charge will apply for those arrangements ordered under a DSL-TDP as set forth in 8.5.3 following.

8.5 Digital Subscriber Line Technology (Cont'd)

8.5.2 Rate Regulations (Cont'd)

(B) DSL Term Discount Plan (DSL-TDP) (Cont'd)

(3) Renegotiation

The customer may choose to terminate an existing DSL-TDP prior to the end of the term period and negotiate a new DSL-TDP without termination liability provided the new DSL-TDP meets the following requirements:

- the new DSL-TDP must represent a term commitment greater than or equal to the previous DSL-TDP, and (T)
- the DSL speed option selected for the new DSL-TDP must be greater than or equal to the speed option of the previous DSL-TDP, and (N)
|
(N)
- the new DSL-TDP must be based upon the rates that are currently in effect and available to all customers.

When the customer converts to a greater term commitment, actual time in service for the original DSL-TDP will be applied to the new DSL-TDP. However, no credits or refunds will apply for the billing of actual time in service for the previous DSL-TDP.

(4) Renewal

The customer must provide the Telephone Company notice of intent to renew a DSL-TDP no later than 60 days prior to its expiration. The renewal rates will be the rates that are currently in effect and available to all customers. If the customer elects not to renew the DSL-TDP, or does not notify the Telephone Company of its intent to renew the DSL-TDP, the customer's service will automatically be billed under the tariffed month-to-month rates in effect at the time the DSL-TDP expires.

(B) DSL Term Discount Plan (DSL-TDP)

(5) Special Construction Charges

Any special construction charges incurred for services billed under a DSL-TDP will apply as specified in Section 14 following.

(6) Termination Liabilities

Customers who subscribe to a DSL-TDP prior to May 5, 2001 will pay termination liability charges as set forth in (a) or (b) following, whichever is less. For customers who subscribe to a DSL-TDP on or after May 5, 2001, a termination liability charge as set for in (b) following will apply.

(N)
—
(N)

(a) If a customer disconnects any portion of their DSL-TDP prior to the end of month 12, the customer will be liable for 100% of the payments remaining for the first twelve months and 50% of the payments remaining for the rest of the term commitment. If the customer disconnects any portion of their DSL-TDP after the end of the 12th month, the customer will be liable for 50% of the payments remaining for the rest of the term commitment. For example, a customer disconnecting in the 10th month of a 3 year term commitment owes 100% of 2 payments and 50% of the 3 year term commitment for an additional 24 months. A customer disconnecting in the 18th month of 3 year term commitment owes 50% of the term payments for an additional 18 months.

8. Specialized Network Services (Cont'd)8.5 Digital Subscriber Line Technology (Cont'd)8.5.2 Rate Regulations (Cont'd)(C) Volume and Term Discount Plan (VTDP)(1) General Description

The DSL Volume and Term Discount Plan (VTDP) provides DSL customers discounted rates based on commitments of minimum volumes over a specific term. The VTDP encompasses all of a customer's DSL services for the same term.

A customer who purchases DSL under the VTDP assumes the following obligations:

- (1) the customer will submit orders to the Telephone Company for the customer's end user locations to receive DSL service;
- (2) the customer will provision all customer premises equipment and wiring to its end users;
- (3) the customer will deal directly with its end users and will be solely liable with respect to all matters relating to the service, including marketing, ordering, installation, maintenance, repair, billing and collections;
- (4) the customer will not direct its end users to contact the Telephone Company regarding any aspect of the service.

8. Specialized Network Services (Cont'd)

8.5 Digital Subscriber Line Technology (Cont'd)

8.5.2 Rate Regulations (Cont'd)

(C) Volume and Term Discount Plan (VTDP)

(1) General Description (Cont'd)

The telecommunications services offered under the VTDP are provided on a wholesale basis to carriers and non-carriers. The telecommunications services offered under the VTDP are not services that the Telephone Company provides at retail and, accordingly, are not subject to the rate provisions of Sections 251(c)(4) and 252(d)(3) of the Communications Act, 47 U.S.C. §§251(c)(4), 252(d)(3).

When service is ordered under a VTDP, access to the Telephone Company's DSL connection point will be provided via Asynchronous Transfer Mode (ATM) service, where facilities and equipment exist. The rates and charges for ATM service are set forth in 8.6 following, and apply in addition to the rates and charges associated with the DSL VTDP.

(N)
 |
 (N)

VTDPs are available for terms of monthly, 1 year, 3 years, and 5 years, at the following commitment levels:

Level 1	1 - 50
Level 2	51 - 500
Level 3	501 - 1000
Level 4	1001 - 2500
Level 5	2501 - 7500

Each of the five commitment levels has minimum line volumes assigned for each year of the VTDP. The commitment level includes all of a customer's in-service DSL lines in the Telephone Company jurisdictions specified in this tariff. The applicable VTDP rate is dependent upon the data access speed requested and the location where the service is provided. Commitment levels are selected by the customer and must be designated in the customer's order for VTDP.

ISSUE DATE:
 December 15, 2000

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.5 Digital Subscriber Line Technology (Cont'd)8.5.2 Rate Regulations (Cont'd)(C) Volume and Term Discount Plan (VTDP)(1) General Description (Cont'd)

The service year will begin on the service anniversary date, which is defined as the date on which the customer places its order for a VTDP and designates the commitment level and term. Each service year runs 12 months from its service anniversary date.

The commitment level must be reached in accordance with the following schedule:

<u>Term</u>	<u>Grace Period</u>
Monthly	end of month
1 year	6 months
3 years	12 months
5 years	24 months

At expiration of the VTDP, the customer may choose a new VTDP, convert to the month-to-month rates, or continue with the rates, charges, terms and conditions and commitment level in effect at the end of the expiring VTDP on a year-to-year basis. A conversion to a new VTDP or to month-to-month rates, or discontinuance, will require that the customer submit a service change order.

The minimum service period for DSL provided under a VTDP is six (6) months. If the DSL is disconnected prior to the end of the minimum service period, the customer will be assessed all applicable monthly recurring rates for the remainder of the minimum service period.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.5 Digital Subscriber Line Technology (Cont'd)8.5.2 Rate Regulations (Cont'd)(C) Volume and Term Discount Plan (VTDP)(1) General Description (Cont'd)

VTDP customers will be subject to shortfall liability charges for missed annual commitments and/or termination liability charges for early termination as set forth in (3) and (4) following.

(2) Annual Review

The commitment level is reviewed at the end of each service year on the service anniversary date. A count is taken of all DSL lines in service, in all Telephone Company jurisdictions covered by this tariff, as of the last day of the service year. Customers who do not meet the minimum quantity of in-service lines for their commitment level on such date will be notified by the Telephone Company.

The commitment levels will be reviewed after each grace period and monthly thereafter. If the commitment levels are not reached within the grace period, the customer shall be assessed a shortfall liability charge. In addition, customers with Commitment Levels 2 through 5, with less than the minimum line volumes, will be reassigned to a reduced commitment level for the next year based on their current line volume.

At the end of any service year, a customer may elect to move to a higher commitment level, either in an existing term VTDP or a longer term VTDP, for the next service year and for the remainder of the VTDP, if it has met the

minimum line volume for its existing commitment level. However, should the customer fail to meet the minimum line volume for the higher commitment level by the end of the service year following such election, an additional charge equal to 20% of the shortfall liability for the service year will be assessed as set forth in (3) following.

(3) Shortfall Liability

Shortfall liability applies to any VTDP customer with Commitment Level 2 through 5 that fails to meet the minimum line volumes for its designated commitment level.

Shortfall liability is based on the difference between the monthly rate for the designated commitment level and the monthly rate for the commitment level that should have been charged based upon the actual quantity of in-service DSL lines at the end of the service period. The shortfall liability is equal to the difference in monthly rate multiplied by the sum of all lines in service at the end of each month during such service period. For example, a customer subscribed to a 5-year VTDP with Commitment Level 4 that has only 800 lines in-service at the end of year 2 will be assessed the difference in the monthly rates between Commitment Level 3 and Commitment Level 4 for each line in service at the end of each month during the service year.

ISSUE DATE:

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.5 Digital Subscriber Line Technology (Cont'd)8.5.2 Rate Regulations (Cont'd)(C) Volume and Term Discount Plan (VTDP)(3) Shortfall Liability (Cont'd)

An additional payment of 20% of the shortfall liability is assessed to those customers who fail to meet the minimum line volume.

(4) Termination Liability

A customer may terminate a VTDP without termination liability or shortfall liability charges if a Telephone Company initiated rate increase causes the customer's rates to increase by 10% or more at any one time during the term of the existing VTDP. Subsequent to a rate increase of 10% or more, customers must either elect to terminate the VTDP, or continue the VTDP at the new rate.

If the customer elects to discontinue its VTDP prior to the end of the commitment period, the customer will be subject to termination charges. Termination charges shall equal one hundred percent (100%) of the unpaid charges for the first twelve (12) months of the term commitment, and fifty percent (50%) of the unpaid charges for the remaining period of the term, based on the number of lines in service at termination.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service8.6.1 Basic Service

Asynchronous Transfer Mode (ATM) service is a connection-oriented fast packet network service that permits the transmission of high speed data, voice and video traffic utilizing cell switching technology. ATM cells are fixed length cells that provide symmetrical or asymmetrical duplex transmissions. Utilizing statistical multiplexing, ATM service enables customers to allocate circuit bandwidth to applications as needed on virtual paths or channels. ATM service allows multiple communications applications to be transmitted within multiple paths or channels utilizing common fiber optic or copper facilities. ATM service allows for the interconnection of customer premises equipment that is ATM compatible.

Physical access to the ATM network is provided via an electrical cross-connect or an ATM access termination connecting the customer premises to the ATM User to Network Interface (UNI) or Network to Network Interface (NNI) port connection. Electrical cross-connects, provided in Section 17 following, are available at speeds of 1.544 Mbps (DS1) or 44.736 Mbps (DS3). ATM access terminations are available at speeds of 1.544 Mbps (DS1), 3.088 Mbps (2xDS1), 6.176 Mbps (4xDS1), 9.264 Mbps (6xDS1), 44.736 Mbps (DS3), 155.52 Mbps (OC3), or 622.08 Mbps (OC12) and are provided in Section 8.6.2 following. When an electrical cross-connect is used in the provision of ATM service, the expanded interconnection regulations, rates and charges set forth in Section 17 will apply in addition to the ATM rates and charges set forth in Section 8.6.6 following.

(C)

8.6.2 Service Components(A) ATM Access Termination

The ATM access termination rate element provides a communications path between the customer's ATM termination equipment and the serving wire center of that equipment. ATM access terminations are available at 1.544 Mbps (DS1), 3.088 Mbps (2xDS1), 6.176 Mbps (4xDS1), 9.264 Mbps (6xDS1), 44.736 Mbps (DS3), 155.52 Mbps (OC3), or 622.08 Mbps (OC12) levels. DS3,

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service8.6.2 Service Components (Cont'd)(A) ATM Access Termination (Cont'd)

OC3 and OC12 ATM access terminations are based on distance. In addition, OC3 and OC12 access terminations will be provided with or without Telephone Company provided terminal equipment at the customer's premises. The mileage used to determine the monthly rate for access terminations located outside a Telephone Company wire center is the airline distance between the customer's designated premises and the Telephone Company serving wire center of that premises. The mileage measurement is determined by utilizing exchange maps and mileage tables located in designated Telephone Company offices for such purposes. When a customer elects to furnish its own terminal equipment at the customer's premises, the customer will work cooperatively with the Telephone Company to provide a compatible physical interface, and will identify approved equipment types for use in conjunction with Telephone Company provided equipment. The customer is responsible for providing all facilities and cabling necessary to connect customer provided equipment to the interface.

(C)
(C)
(M)(B) ATM Interoffice Mileage

The ATM interoffice mileage rate element provides for the end office equipment and the transmission channel between the serving wire center of the customer's designated premises and the serving wire center of the ATM switch. ATM interoffice mileage rates are made up of the interoffice mileage facility rate and the interoffice mileage termination rate. ATM interoffice mileage rates are set forth in Section 8.6.6 following and are available at speeds of 1.544 Mbps (DS1), 3.088 Mbps (2xDS1), 6.176 Mbps (4xDS1), 9.264 Mbps (6xDS1), 44.736 Mbps (DS3), 155.52 Mbps (OC3), and 622.08 Mbps (OC12).

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service8.6.2 Service Components (Cont'd)(B) ATM Interoffice Mileage (Cont'd)(1) ATM Interoffice Mileage Facility

The ATM interoffice mileage facility rate recovers the cost of the transmission path which extends between the serving wire center of the customer's designated premises and the Telephone Company serving wire center of the ATM switch, and includes primarily outside plant used to provide the facility.

(2) ATM Interoffice Mileage Termination

The ATM interoffice mileage termination rate recovers the cost of the end office equipment associated with terminating the facility (i.e., basic circuit equipment and termination at the serving wire center and/or ATM switch). The Telephone Company applies a 50% billing percentage to the mileage termination fixed rate on jointly owned circuits, and applies 100% on wholly owned circuits. When the ATM interoffice mileage facility is zero (i.e., collocated service wire centers), neither the interoffice mileage facility nor the interoffice mileage termination rate will apply.

(C) User to Network Interface (UNI) Port Connection

The UNI port connection is a standard interface used to connect the end user to the Telephone Company's ATM network. It receives the data cell from the customer's network or CPE devices and verifies that the customer address destination is valid before transferring the cell.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)

8.6 Asynchronous Transfer Mode (ATM) Service

8.6.2 Service Components (Cont'd)

(C) User to Network Interface (UNI) Port Connection (Cont'd)

The UNI port connection is available at speeds of 1.544 Mbps, 3.088 Mbps (2xDS1), 6.176 Mbps (4xDS1), 9.264 Mbps (6xDS1), 44.736 Mbps, 155.52 Mbps, and 622.08 Mbps. The UNI port connection must be provided at the same transmission speed as the electrical cross-connect or ATM access termination. One electrical cross-connect or ATM access termination is required per UNI port connection.

(D) Network to Network Interface (NNI) Port Connection

The NNI port connection provides bi-directional polling between the Telephone Company's ATM switch and the interexchange carrier's or other customer's ATM network.

(C)
|
(C)

The NNI port connection is available at speeds of 1.544 Mbps, 3.088 Mbps (2xDS1), 6.176 Mbps (4xDS1), 9.264 Mbps (6xDS1), 44.736 Mbps, 155.52 Mbps, and 622.08 Mbps. The NNI port connection must be provided at the same transmission speed as the electrical cross-connect or ATM access termination. One electrical cross-connect or ATM access termination is required per NNI port connection.

(E) Permanent Virtual Circuits (PVCs)

The PVC provides a software defined electronic path between two port connections within the ATM network. An intraexchange PVC defines a path across the Telephone Company's ATM network and the customer's premises. An interexchange PVC defines a path between two Telephone Company ATM networks. Meetpoint billing arrangements do not apply to interexchange PVCs. A UNI or NNI port connection may be associated with any number of PVCs. Since all PVCs need not be in use at the same time, it is possible for

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.2 Service Components(E) Permanent Virtual Circuits (PVCs) (Cont'd)

the total bandwidth of all PVCs associated with one Port Connection to exceed the bandwidth of the Port Connection. It is not possible, however, for the simultaneous aggregate of the PVC's throughput to exceed the bandwidth of the Port Connection. Such a relationship is referred to as oversubscription and, when this occurs, there can be no guarantee that the bandwidth defined for that PVC will be available at any point in time. The maximum port oversubscription allowed is by a subscription factor of 500%. Multiple PVCs can be defined over a single ATM UNI or NNI Port Connection, thereby providing a single access line with the capability to transmit data, voice, and video to multiple destinations simultaneously. A PVC can be set up as either a Virtual Path (VP) or a Virtual Channel (VC) type connection. A VP may contain multiple VCs, referred to as tunneling. Tunneling allows customers to establish VCs or end to end connections between the customer CPE via VPs.

Customers may select from the following three Quality of Service (QoS) categories for PVCs to ensure greater reliability for mission critical application in the event of network congestion:

Lowest Priority – Unspecified Bit Rate (UBR)

Medium Priority – Variable Bit Rate-non-real time (VBR-nrt)

Highest Priority – Constant Bit Rate (CBR)

This flexibility helps to ensure maximum performance and satisfaction for individual customer communications applications.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.2 Service Components (Cont'd)(F) Information Rate (IR)

Information Rate (IR) defines the amount of data throughput on a designated PVC that the Telephone Company will support under normal operating conditions. IRs are traffic management parameters that allow the customer to fine tune implementation of ATM Service. The IRs of PVCs can be customer specified and can be ordered in increments of bandwidth. IRs can be used on CBR and VBR PVCs only. IRs for UBR are, by definition, not used, and IRs can be up to the line rate of the UNI port transfer rate. UBR uses available network bandwidth and is a "best effort" service, therefore, there are no guarantees with the delivery of UBR traffic. IRs are assigned to each PVC symmetrically (two-way). Any data burst beyond the IR may be labeled Discard Eligible (DE) if the data transfer rate exceeds the IR of the PVC being used. If the ATM network develops congestion, the cells marked DE may be discarded.

8.6.3 Service Provisioning

- (A) ATM service is offered where facilities exist. If it is necessary to construct facilities to satisfy service requests, the service may be provided pursuant to the Telephone Company's special construction provisions set forth in Section 14 following.
- (B) ATM service requires the use of industry standard CPE that functions as a multiplexer, aggregator, concentrator, or router. The Telephone Company will advise the customer of the type of CPE that the customer will need to purchase to support ATM service. The CPE functions to accumulate customer data and transfer it into an ATM format suitable for transmission over the ATM Network.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.3 Service Provisioning (Cont'd)

- (C) In the operation of ATM, the CPE captures arriving data into fixed-length ATM 53-byte cells. These cells contain a 48-byte cell user information segment, and a five-byte header containing a Virtual Path Identifier (VPI) and a Virtual Channel Identifier (VCI), identifying which PVC in the network should be used to forward the cell to the proper destination. The CPE sends the cells into the ATM network over an electrical cross-connect or ATM access termination. The ATM switch, located in the Telephone Company central office, reads the identifying header information and routes the cell to the proper destination over a VP and/or VC based on a preestablished PVC.
- (D) ATM service is capable of handling the requirements of bursty data sources because of the ability of the service to allocate additional bandwidth when not in use by other sources. ATM service can also transmit delay sensitive traffic, such as voice and video, on the same physical circuit, but with different QoS on separate PVCs within the same physical circuit.
- (E) The actual throughput or information rate (IR) for aggregated PVC bandwidths cannot exceed the port speed, or the port line transfer rate. The customer must specify, when ordering, the QoS for each PVC to be connected to the ATM network. The QoS category defines the performance parameters for each connection to meet specific networking requirements. The Telephone Company provides the following three QoS categories:

ISSUE DATE:

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.3 Service Provisioning (Cont'd)

(E) (Cont'd)

- (1) Constant Bit Rate (CBR) - for delay or timing sensitive traffic such as voice or interactive video, and provides a constant data rate and consistent delay parameters throughout the ATM network. CBR PVCs are given the highest priority in the ATM network, and are provisioned to provide the minimum Cell Delay Variation (CDV) or "jitter". The Peak Cell Rate (PCR), which is the highest transmission rate the logical connection will allow, must be specified by the customer.
- (2) Variable Bit Rate (VBR-nrt) - a non-real time service designed for bursty data applications that provides a preassigned variable bit rate. VBR-nrt requires three traffic parameters: (1) Peak Cell Rate (PCR), which defines the maximum rate of transmission, (2) Sustainable Cell Rate (SCR), which provides an average throughput information rate expected on the connection, and (3) Maximum Burst Size, which is the maximum number of consecutive cells that may be transmitted to the Telephone Company ATM network in a single burst at a rate that exceeds the sustained cell rate (SCR), but does not exceed the peak cell rate (PCR), assigned to the variable bit rate (VBR) connection. The default MBS is 100 cells, unless the customer specifies another value of less than 100 cells. Customers must specify the PCR, SCR, and MBS for ATM service. Oversubscription is allowed with VBR. The maximum subscription rate for a VBR PVC is 400%. Transmission speeds cannot exceed 400% of the SCR for durations greater than the MBS without encountering discard eligible cells, nor can transmission speeds exceed the port speed.

ISSUE DATE:
November 15, 2000

Issued Under Transmittal No. 130
Vice President-Regulatory Affairs
6360 Sprint Parkway
Overland Park, Kansas 66251

EFFECTIVE DATE:
November 16, 2000

ACCESS SERVICE

8. Specialized Network Services (Cont'd)

8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)

8.6.3 Service Provisioning (Cont'd)

(E) (Cont'd)

- (3) Unspecified Bit Rate (UBR) - takes advantage of excess network bandwidth and is best suited for communication applications where timing of delivered data is not critical. PCR and SCR values are not used with UBR. An advantage of UBR is that ATM cells can be transmitted up to the port line rate, if available, rather than being limited to a predefined maximum PCR, as with VBR and CBR. However, throughput depends on the total data volumes being transmitted through the switch. UBR PVCs must be ordered at the same transmission speed as the port with which it is associated.

(N)
 |
 (N)

Since multiple PVCs may be defined on one physical port, it is possible for the cumulative data IRs of multiple PVCs to exceed the physical bandwidth of the port. This is referred to as oversubscription and, when this occurs, there will be no guarantee that the IR defined for the port and PVC will be available at any point in time.

For CBR PVCs, the customer may specify IRs in terms of PCR. The maximum PCR for a CBR PVC is limited to 99% of the port transfer rate. When CBR traffic is mixed with VBR and UBR on the same port, the sum of all the PCRs associated with the CBR PVCs must be subtracted from the port speed before calculating the subscription level for remaining VBR PVCs. The PCR should never exceed the PCR available at the lowest port access between the local and remote locations.

(E) (Cont'd)

For VBR PVCs, the user can burst above the SCR for short periods only. The limit for VBR transmission at the PCR is 100 cells. This limit is called the Maximum Burst Size (MBS). If the MBS is exceeded, a period of lower activity must follow to meet the SCR. IRs for UBR traffic are not specified and use only available network bandwidth and may burst up to the line rate.

8.6.4 Rate Regulations

The minimum service period for ATM service is one month.

The rates and charges for ATM service are set forth in Section 8.6.6 following, and are in addition to any applicable rates and charges set forth in any other sections of this tariff. There are two types of rates and charges that may apply to ATM service. These are monthly recurring rates and nonrecurring charges, both of which are billed in advance.

When a customer requests that a UNI or NNI port connection or ATM access termination be rearranged, a charge equal to one half the month-to-month UNI or NNI port connection or ATM access termination nonrecurring charge associated those services will apply. Service rearrangements are changes to existing (installed) services which do not result in either a change in the minimum period requirements as set forth in 5.2.6(E) preceding or a change in the physical location of the point of termination at the customer designated premises. Changes in the physical location of the point of termination are treated as disconnects and starts, and will be assessed the nonrecurring charge associated with the month-to-month rates for that service.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.4 Rate Regulations (Cont'd)

When the customer orders additional PVCs with a designated IR, the PVC nonrecurring charges shall apply. When a change is made to a customer's ATM configuration at the customer's request, the administrative nonrecurring charge shall apply. Such changes are defined as those rearrangements necessary to add, delete, or rearrange the customer's configuration, including changes to IRs. Although multiple changes may be caused by such actions, only one administrative charge will apply. When the customer changes the IR on an existing PVC, the PVC nonrecurring charge will apply in addition to the administrative nonrecurring charge.

Special construction charges, as set forth in Section 14 following, may apply when technical limitations and/or the lack of facilities exist, or if it necessary to construct facilities to satisfy service requests.

The customer should specify the IR and class of service for each PVC ordered. The IR is the maximum information rate at which the customer's traffic will be admitted to the ATM network without being designated eligible for discard. No individual PVC IR shall exceed 99 percent of the UNI Port Connection transmission speed. The sum of all PVC VBR IRs on a single ATM port must not exceed 500 percent of the port line speed remaining after removal of the sum of the CBR PVC speeds.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.5 ATM Term Agreement Plans(A) General

Asynchronous Transfer Mode Term Agreement Plans (ATMTAP) are available for UNI and NNI port connections, ATM access terminations, and ATM interoffice mileage. An ATMTAP provides the customer with discounted rates for the services listed. The customer agrees to a minimum service commitment on a per service basis.

(B) Ordering Provisions

The customer must order an ATMTAP in writing to the Telephone Company. An ATMTAP may be ordered based on the following plan options:

3 Years

5 Years

Once the plan is established, standard access ordering procedures will be followed.

When a customer converts to an ATMTAP, no access order charges are applied toward facilities in service at that time. If a customer moves from a month-to-month plan to an ATMTAP, or upgrades from one ATMTAP to another, no access order charges are applied.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.5 ATM Term Agreement Plans (Cont'd)(C) Service Rearrangements

When a UNI or NNI port connection or ATM access termination committed to an ATMTAP is rearranged as set forth in 8.6.4 preceding, a charge equal to one half the month-to-month UNI or NNI port connection or ATM access termination nonrecurring charge associated those services will apply.

(D) Termination Liabilities

If a customer disconnects any portion of their ATMTAP service prior to the expiration of the commitment period, the customer will be billed 50% of the monthly ATMTAP charges for the remaining portion of the committed term. For example, a customer disconnecting in the 12th month of a 3 year plan will be charged 50% of the remaining 24 months of billing.

(E) Rate Changes

In this section, the term "rate" refers to the charges associated with the entire circuit covered by an ATMTAP. Rate increases or decreases will automatically be applied to the monthly term plan rates for the remaining term of the ATMTAP. If a Telephone Company initiated rate increase causes a customer's rates to increase by 10% or more at any one time, the customer may cancel the ATMTAP without incurring termination liability charges.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.6 Asynchronous Transfer Mode (ATM) Service (Cont'd)8.6.5 ATM Term Agreement Plans (Cont'd)(F) Extension of a ATMTAP Commitment Period

ATMTAP commitment periods can be extended by the customer at any time during the term of the plan, up to a maximum of 5 years. The number of months accrued in the current plan will apply toward the new plan selected. For example, a customer having completed 15 months of a 3 year commitment can extend the commitment to 5 years and no additional charges will be assessed. The first payment will be considered the 16th payment under the new 5 year plan.

(G) Renewal of a ATMTAP

At the end of the ATMTAP service commitment period, the customer may subscribe to a new ATMTAP at the prevailing rates set forth in Section 8.6.6 following. If the customer does not specify renewal terms in writing 90 days prior to the expiration of the three or five year service period, the commitment period and ATMTAP rates and regulations in effect at the time of expiration will automatically renew.

(H) Cancellation Charges

When a customer cancels an order for ATM services being provided under an ATMTAP, cancellation charges, as set forth in 5.2.4 preceding, will be calculated using the nonrecurring charges associated with the service originally ordered by the customer. The customer may terminate an ATMTAP at the end of the minimum commitment period with no penalty or obligation to continue service.

8.7 Sprint Custom Access Solutionssm

8.7.1 General

Sprint Custom Access Solutionssm provides for the integration of multiple voice and frame relay channels over the same 1.544 Mbps facility. With Sprint Custom Access Solutionssm, voice channels are segregated from the frame relay channels using a digital access and cross connect system (DACS) located in the Telephone Company's central office. The DACS will route the voice traffic to the serving wire center switching equipment, while the data traffic will be routed to the Telephone Company's frame relay switch. The frame relay bandwidth selected by the customer will determine the UNI port connection and PVC committed information rate provided. One PVC, with throughput equal to 50% of the UNI port connection, is provided with each Sprint Custom Access Solutionssm arrangement. For example, when the customer selects a Sprint Custom Access Solutionssm arrangement for 10 voice channels and 512 Kbps frame relay service, a PVC with a CIR of 256 Kbps will be provided. Additional PVCs requested by the customer will be subject to the rates and regulations set forth in Section 8.3 preceding.

Customers subscribing to Sprint Custom Access Solutionssm must order voice and frame relay channels at the same time in one of the following combinations:

Voice Channels	Frame Relay Service		
	256 Kbps (4 Channels)	384 Kbps (6 Channels)	512 Kbps (8 Channels)
6	10	12	14
8	12	14	16
10	14	16	18
12	16	18	20
14	18	20	22
16	20	22	24
18	22	24	N/A
20	24	N/A	N/A
<i>Shaded area reflects total channels utilized for each combination.</i>

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.7 Sprint Custom Access Solutionssm (Cont'd)8.7.1 General (Cont'd)

Sprint Custom Access Solutionssm will be provided over a 1.544 Mbps facility for connection to the Telephone Company's switching equipment and frame relay network via a digital access and cross connect system. The provision of Sprint Custom Access Solutionssm requires terminating equipment (e.g., channel service unit) at the customer's designated premises to segregate the traffic between voice and data. The customer is responsible for providing and maintaining the terminating equipment at the customer's designated premises. Sprint Custom Access Solutionssm includes the full bandwidth of a 1.544 Mbps facility, and cannot be provisioned over fractional DS1 channels as set forth in 7.2.8(A)(2).

The following features are provided with Sprint Custom Access Solutionssm voice channels at no additional charge to the customer:

(A) Incoming Call Identification (Caller ID)

Caller ID provides the customer with the telephone number of the calling party and is intended solely for the use of the Sprint Custom Access Solutionssm subscriber.

(B) Call Transfer

Call Transfer allows the customer to transfer the original calling party to another party at any location within or outside of the end office.

Sprint Custom Access Solutionssm is available only in suitably equipped central offices as identified in 8.7.4 following.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)

(N)

8.7 Sprint Custom Access Solutionssm (Cont'd)8.7.2 Rate Regulations

- (A) The service period for Sprint Custom Access Solutionssm is one, two, or three years. All Sprint Custom Access Solutionssm arrangements will begin in month one. If the customer requests that service be disconnected prior to the expiration of the service period selected, a 50% penalty will be assessed for the remaining months of the term. For example, a customer disconnecting in the 12th month of a 3 year plan will be charged 50% of the remaining 24 months of billing.
- (B) Customers may upgrade a Sprint Custom Access Solutionssm arrangement without incurring termination liability penalties under the following circumstances:
- (1) The order for the disconnect of the existing Sprint Custom Access Solutionssm and the order for the upgraded service arrangement must be received at the same time, with no lapse in service between the installation of the new service and the disconnect of the existing service.
 - (2) The upgraded service is provided between the same customer and central office locations as the discontinued Sprint Custom Access Solutionssm service.
 - (3) The service period of the upgraded service is equal to or greater than the service period of the existing Sprint Custom Access Solutionssm.

EFFECTIVE DATE:
February 8, 2001

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.7 Sprint Custom Access Solutionssm (Cont'd)8.7.2 Rate Regulations (Cont'd)

(B) (Cont'd)

For example, a Sprint Custom Access Solutionssm arrangement equipped with 6 voice channels and 256 Kbps frame relay service may be upgraded to a higher bandwidth or longer term Sprint Custom Access Solutionssm arrangement, or a Sprint Custom Access Solutionssm arrangement may be upgraded to a next generation offering such as OptiPoint, Sprint SONET Ring Servicesm, or Asynchronous Transfer Mode (ATM) service.

Additionally, customers may disconnect Sprint Custom Access Solutionssm, without penalty, should the total of the monthly recurring rates associated with the Sprint Custom Access Solutionssm increase by 10% or more at any one time. Rate decreases will automatically be applied to the monthly recurring rates for the remainder of the service period. If the customer does not specify renewal terms in writing 90 days prior to the expiration of the service period, the existing Sprint Custom Access Solutionssm rates in effect at the time of expiration will automatically continue. The customer can terminate Sprint Custom Access Solutionssm at the end of the service period with no penalty or obligation to continue the service.

- (C) The provision of Sprint Custom Access Solutionssm requires that a combination of voice and frame relay channels, as set forth in 8.7.1 preceding, remain in service. Should the customer elect to disconnect either the voice or frame relay channels provided, the entire Sprint Custom Access Solutionssm arrangement must be disconnected and applicable termination liability penalties will apply.

ACCESS SERVICE

8. Specialized Network Services (Cont'd)8.7 Sprint Custom Access Solutionssm (Cont'd)8.7.2 Rate Regulations (Cont'd)(D) Service Rearrangements

When a Sprint Custom Access Solutionssm is rearranged, a charge equal to one half the nonrecurring installation charge for that Sprint Custom Access Solutionssm arrangement will apply. Service rearrangements are changes to existing (installed) services which do not result in either a change in the minimum period requirements as set forth in 5.2.6(E) preceding or a change in the physical location of the point of termination at the customer designated premises. Changes in the physical location of the point of termination are treated as disconnects and starts, and will be assessed the full nonrecurring charge associated with the Sprint Custom Access Solutionssm arrangement selected.

(E) Cancellation Charges

When a customer cancels an order for Sprint Custom Access Solutionssm, cancellation charges, as set forth in 5.2.4 preceding, will be calculated using the nonrecurring charges associated with the Sprint Custom Access Solutionssm arrangement being cancelled.

(F) Special Construction charges, as set forth in Section 14 following, may apply where facilities and/or operating conditions do not permit the provision of Sprint Custom Access Solutionssm and the customer desires the Telephone Company to provision the Sprint Custom Access Solutionssm.

8.7.3 Application of Rates

The rates and charges for Sprint Custom Access Solutionssm cover all associated service components (i.e., UNI port connection, PVC, voice channels equipped with call transfer and caller ID, and use of the DACS equipment). The Sprint Custom Access Solutionssm rates are set forth in Section 8.7.5 following, and are in addition to any applicable rates and charges set forth in other sections of this tariff. The applicable rates for Sprint Custom Access Solutionssm include monthly recurring rates and nonrecurring charges, both of which are billed in advance.
