ACCESS SERVICE

7. Special Access Service (Cont'd)

7.2 Service Descriptions (Cont'd)

7.2.11 OC-3, OC-12, OC-48 and OC-192 Dedicated Ring (Cont'd)

(B) Dedicated Ring Configuration (Cont'd)

(1) Nodes (Cont'd)

If the primary OC-48 Dedicated Ring has either two or three nodes, then at least two nodes (excluding sub-ring nodes) with separate addresses must be common between the primary OC-48 Dedicated Ring and the additional OC-48 Dedicated Ring(s). At least one of the common nodes must be a customer premises node and at least one of the nodes must be a central office node.

If the primary OC-48 Dedicated Ring has four or more nodes, then at least three nodes (excluding sub-ring nodes) with separate addresses must be common between the primary OC-48 Dedicated Ring and the additional OC-48 Dedicated Ring(s). At least one of the common nodes must be a customer premises node and at least one of the nodes must be a central office node.

The customer will be billed time and material for any additional charges incurred by the Telephone Company in locating Company equipment at the customer premises.

Moves of Dedicated Ring nodes requested by the customer will be billed time and material for charges incurred. No change in the billing period is required. Termination Liability charges will not apply to moves of Dedicated Ring nodes. If an additional location, monthly node is placed to facilitate migration of services to the new node location, monthly node charges will apply to both the additional node and the node being moved during the period for service transition.

(N)  
|  
(N)

(a) Direct Drop Node

An optional Direct Drop Node (DDN) is available on an OC-12 dedicated ring. This Node has direct add/drop capability not to exceed 3 DS3s or its equivalent.

The remaining bandwidth of the OC-12 ring continues on through the Node to another drop point on the ring. Use of the Direct Drop Node allows customers to drop DS1s directly from the Node without the need for the Optical to Electrical DS1 Add/Drop Capability option.

OC-12 nodes and OC-12 DDNs may be used together in making up an OC-12 dedicated ring. A DS1 that enters the ring via a port on a Direct Drop Node must also exit via a port on another Direct Drop Node (DDN on - DDN off). A DS3 that enters the ring via a port on a Direct Drop Node may exit via a port on either a Direct Drop Node or OC-12 node. Direct Drop Node is not available in a two-node ring configuration.
